

Bilal Bin Kabeer

Full Stack Developer | Angular & .NET Core

+971 542157969 | bilalbinkabeer98@gmail.com | Dubai,UAE | [LinkedIn Profile](#)

PROFESSIONAL SUMMARY

Highly motivated Full Stack Developer with 2.5+ years of professional experience in building secure, scalable, and business-focused web applications using **Angular, .NET Core, C#, REST APIs, and SQL**. Experienced in delivering enterprise solutions within the **financial services industry**, including **loan audit, risk monitoring, and portfolio transfer systems**. Strong background in end-to-end application development, from responsive UI design to API development and database programming. Demonstrates a solid understanding of performance, security, and maintainability, with a proven ability to contribute to high-impact projects in fast-paced professional environments.

TECHNICAL SKILLS

Frontend: Angular , TypeScript, JavaScript , HTML, CSS, Bootstrap, Reactive Forms, RxJS

Backend: ASP.NET Core, C#, RESTful API Design, Entity Framework, Middleware

Database: SQL Server,MySQL,PL/SQL

Tools & Practices: GitHub, Agile/Scrum, REST APIs, Code Review, Bug Fixing,Troubleshooting

PROFESSIONAL EXPERIENCE

Manappuram Finance Ltd.

Oct 2023 – Apr 2026

Full Stack Developer(Angular & .NET Core) — Thrissur, Kerala, India

- Designed and developed end-to-end web modules for loan lifecycle management, audit compliance, and risk monitoring in a large-scale NBFC environment.
- Built dynamic, responsive Angular frontends with complex form validations, role-based access control, and data-driven dashboards for operational teams.
- Developed robust .NET Core RESTful APIs to handle secure data transactions, business logic processing, and integration with Oracle/PL/SQL databases.
- Authored and optimized complex PL/SQL stored procedures for loan data retrieval, risk computation, and report generation across business units.
- Implemented loan audit workflows covering multi-stage verification, status tracking, and compliance reporting with full traceability.
- Contributed to early risk detection systems that proactively flag delinquent accounts, enabling business teams to take preventive action.
- Participated in Agile sprints, conducted code reviews, resolved production bugs, and enhanced application performance and stability.
- Collaborated closely with business analysts, QA teams, and senior architects to translate functional requirements into technical solutions.

SLR Shop

Jun 2023 – Oct 2023

Frontend Developer Intern (React) — Thrissur, Kerala, India

- Designed and developed the e-commerce website for SLR Shop,a startup,using React to enables seamless online product browsing and purchasing.
- Built responsive UI components and product listing pages,ensuring a smooth user experience across devices.

KEY PROJECTS

Audit Module | Angular | .NET Core | SQL

- Designed and developed a comprehensive Audit Module to track and verify the complete lifecycle of loan accounts across multiple processing stages — from origination and disbursement to repayment and closure.
- Implemented multi-stage verification workflows that allow audit officers to review loan data at each stage (application, verification, approval, disbursement, and recovery) with status transitions and remarks capture.
- Built secure .NET Core APIs to manage audit trail creation, retrieval, and status updates, enforcing role-based access so only authorized users could view or modify audit records.

- Developed PL/SQL procedures to extract and consolidate loan records from multiple tables, ensuring audit data integrity and enabling efficient reporting for compliance teams.
- Created an intuitive Angular UI with dynamic grids, filters, and detail views to help auditors quickly identify irregularities, flag discrepancies, and generate audit-ready reports.
- Ensured full data traceability and compliance readiness, supporting internal audits and regulatory inspection requirements of the NBFC.

MOSY (Monitoring System) Module | Angular | .NET Core | PL/SQL

- Built a centralized monitoring system to provide a unified, real-time view of loan histories across all business units and branches of the organization.
- Enabled operations and management teams to track loan status, payment history, outstanding balances, and account movements through a single dashboard interface.
- Developed Angular components with advanced search, filter, and drill-down capabilities, allowing users to navigate from branch-level summaries down to individual loan records.
- Integrated .NET Core backend APIs with PL/SQL procedures to aggregate loan data across distributed databases, ensuring consistency and accuracy in reporting.
- Designed configurable reporting views that allowed different business units to monitor performance metrics relevant to their operations, improving overall portfolio visibility.

Early Warning Signal (EWS) Application | Angular | .NET Core | PL/SQL

- Contributed to an Early Warning Signal application designed to proactively detect potential loan risks before they escalate into non-performing assets (NPAs).
- Implemented frontend screens to display risk-scored loan accounts, enabling relationship managers and risk officers to identify and prioritize at-risk borrowers at an early stage.
- Developed backend logic to process risk indicators such as missed payments, overdue EMIs, and behavioral patterns, flagging accounts that meet predefined risk thresholds.
- Built PL/SQL database procedures to run risk assessment queries on large loan portfolios, generating signals and categorizing accounts by risk severity levels.
- Integrated an alert and reporting workflow that notified business teams of high-risk accounts, enabling timely intervention and reducing potential credit losses.

Direct Assignment Module | Angular | .NET Core | PL/SQL

- Developed a Direct Assignment Module to manage the end-to-end process of transferring a pool of loans from Manappuram Finance to external financial institutions (banks, NBFCs, or investors).
- Implemented workflows to select, validate, and package loan pools for assignment, ensuring all eligibility criteria (NPA status, tenure, risk rating) were met before transfer.
- Built Angular interfaces for configuring assignment parameters, reviewing selected loan pools, and tracking the status of each assignment transaction from initiation to completion.
- Developed .NET Core APIs to handle data exchange between the organization and acquiring financial institutions, with validation checks and error handling at each transfer stage.
- Automated PL/SQL procedures to update loan ownership records, generate assignment reports, and maintain an audit trail of all transferred accounts for regulatory and accounting purposes.
- Supported the organization's securitization and liquidity management goals by enabling efficient and compliant loan portfolio transfers.

EDUCATION

Master of Science (M.Sc.) in Electronics – University of Calicut, Kerala

Nov 2022

Bachelor of Science (B.Sc.) in Electronics – University of Calicut, Kerala

May 2020

CERTIFICATIONS

MEARN Stack Development Certification — Luminar Technolab, Cochin, Kerala

Dec 2022 – May 2023

LANGUAGES

English, Malayalam, Hindi
